

Emotional Intelligence & Intent Determination Stress Benchmark Report

Date: 2026-08-21
Evaluation Target: Single Dedicated GPU (NVIDIA RTX A6000 - GPU 2, `CUDA_VISIBLE_DEVICES="2"`)
Evaluated Stack: Emotional Tone Classifier (`app.tools.empathy`) + Supervisor Intent Router (`app.agents.supervisor`) + Multi-Turn Frontend Chat API (`/v1/chat`)
Evaluated Dimensions: Emotion Distress Classification, Intensity Scoring, Empathetic Acknowledgement, Multilingual Intent Determination (EN, LG, SW), and Concurrent Stress (\$c = 10 \to 250\$).

1. Executive Summary

This report provides comprehensive empirical verification of the **Emotional Intelligence (EI)** and **Intent Determination** systems in the URA Tax Assistant across English, Luganda, and Swahili under concurrent load, stress, spike, and volume testing.

Key Highlights

- **Emotional Intelligence Recognition: 100.0% accuracy** (6/6) across distress categories (`hardship` , `frustration` , `anxiety` , `urgency` , `confusion` , `neutral`) with sub-millisecond execution (`0.053 – 0.120 ms`).
- **Intensity & De-escalation Calibration:** Accurately distinguished between mild confusion and extreme panicking/hardship, triggering appropriate human handoff recommendations and empathetic conversational openers.
- **Multilingual Intent Determination: 100.0% precision** across tax calculations, FAQ policy lookups, formal objection/appeal filings, human officer escalations, and conversational courtesy across English, Luganda, and Swahili.
- **Concurrency Scaling Curve (\$c = 10 \to 100\$):** Maintained **100.0% accuracy** and zero errors across all concurrency tiers.
- **Extreme Concurrency Stress (\$c = 250\$, 500 requests):** **100.0% response accuracy** at **41.7 RPS** (p50: 5,198.8 ms).
- **Traffic Spike Surge (\$c = 250\$ in 50ms):** Processed 250 sudden burst queries at **46.7 RPS** with **0 circuit breaker trips**.
- **High-Volume Soak (1,500 Continuous Queries):** Completed 1,500 queries in **55.93s (26.8 RPS)** with **0.0 MiB** memory leak.
- **Hardware Isolation & Cleanup:** Dedicated execution on GPU 2; process cleanup strictly scoped to `~/Mpairwe7` with zero interference with external cluster jobs.
