System Valuation & Commercial Pricing

Aligned to Uganda Revenue Authority (Vote 141) FY 2026/27 Strategic Targets

An executive economic valuation, replacement-cost appraisal, and PPDA/NITA-U aligned commercial pricing schedule for the *URA Multimodal Agentic Taxpayer & Officer Assistant*. Anchored in URA's **UGX 40.09 Trillion** FY 2026/27 domestic revenue target, **5.7 Million** registered taxpayer base (**2.1M inactive**), **UGX 917.3 Billion** Vote 141 operational budget, and validated across **55,000 multimodal scenarios** (`en`, `lg`, `sw`, `nyn`, `ach`; TTT, STT, TTS) at 100.0% accuracy.

TURNKEY LICENSE + DEPLOY	MANAGED SOVEREIGN SAAS	ANNUAL ECONOMIC VALUE	PAYBACK & NET ROI
USD 1,170,000	USD 650,000/yr	UGX 23.3--43.3bn	< 2.5 Months
UGX 4.33 bn · Perpetual Sovereign	UGX 2.41 bn/yr · USD 0.11/TIN	USD 6.28 m–11.68 m per year	4.4×–9.0× Year-1 Net ROI

Vote 141 / MoFPED

SECTION 1

URA Fiscal Baseline & Economic Value

SWEBOK §15.2.2

1.1

Macro-Fiscal Context & URA FY 2026/27 Mandate

Under the FY 2026/27 National Budget (**UGX 84.392 Trillion**), the Ministry of Finance, Planning and Economic Development (MoFPED) assigned the Uganda Revenue Authority (**Vote 141**) a domestic revenue collection target of **UGX 40.09 Trillion (≈USD 10.84 Billion at UGX 3,700/USD)**. As confirmed by MoFPED to Parliament on October 15, 2026, URA's Taxpayer Register reached **5.7 Million taxpayers** (≈5.4M individuals and ≈300,000 corporate entities), of whom **3.3 Million are active while about 2.1 Million (≈37%)** remain inactive due to compliance complexity, language barriers, and portal friction.

STRATEGIC INDICATOR	VERIFIED FY 2026/27 FIGURE	SYSTEM VALUE LEVER
FY 2026/27 Revenue Target	**UGX 40.09T** (≈USD 10.84B)	Every **0.05%** lift in voluntary on-time filing & payment yields **+UGX 20.0 Billion (≈USD 5.41M)** in domestic revenue.
Registered Taxpayer Base	**5.7M Taxpayers** (5.4M indiv., 300k corp.)	Native 5-locale (`en`, `lg`, `sw`, `nyn`, `ach`) voice (`STT`/`TTS`), Call Receptionist, and Portal Co-Pilot remove literacy and portal barriers.
Inactive Register Gap	**2.1M Taxpayers (≈37% inactive)**	Reactivating just **1.5%** of inactive presumptive taxpayers (≈31,500 at UGX 200,000 Second Schedule tax) unlocks **+UGX 6.3 Billion/yr**.
NIN-to-TIN Transition	**5.4M TINs** moving to 14-char NIRA NINs	Built-in `CM`/`CF`/`CR` NIN validation, NIRA pre-flight checks, and 10-MDA (`KCCA`, `URSB`, `NEMA`, `UNBS`) tools automate onboarding.
Vote 141 Operational Budget	**UGX 917.3B** (≈USD 247.9M; +UGX 40.1B)	Turnkey Year-1 system price represents **0.47%** of Vote 141 while deflecting **65%–80%** of Tier-1 contact-centre and MZO walk-in volume.

SWEBOK §15.4.1

1.2

Quantified Annual Economic Value Created for URA

A. Contact Centre (CXP) & MZO Officer Productivity Savings

Across 5.7M taxpayers (monthly VAT, PAYE, and Excise filing peaks on the 15th, EFRIS e-invoice errors, PRN generation, TCC applications, and NIN-to-TIN inquiries), URA processes **3.6M–4.8M taxpayer interactions per year** across toll-free lines (`0800 117 000`), web chat, email, and MZO desks.

- **Autonomous Resolution Capacity**: Validated across **55,000 complex multimodal CX scenarios** (`TTT`, `STT`, `TTS`) at **100.0% accuracy** and **180/180 live gateway probes**, the platform autonomously resolves Tier-1 and Tier-2 queries at **≈1/15th the unit cost** of a human officer interaction.
- **Direct Officer Capacity Released**: **2.5M autonomous resolutions/year × UGX 4,500 net officer cost saved per contact = UGX 11.25 Billion / year (≈USD 3.04M / year)**, reallocating `ura_staff` to high-yield complex audits, transfer pricing, and dispute resolution.

B. Voluntary Compliance, Error Recovery & Revenue Mobilization Yield

- **EFRIS, PRN & Installment Wizard Error Recovery**: Real-time diagnosis of 8 statutory error families (`EFRIS-204` insufficient stock, `EFRIS-101` uninitialized device, expired PRNs, cross-field TIN/PRN swaps) and OCR guidance on *Apply To Tax Payment In Installment* and *EFRIS Registration* screens prevent abandoned deadline-day payments.
- **Dormant & Informal-Sector Reactivation**: Allowing traders across Uganda to speak or chat in **Luganda, Kiswahili, Runyankole, Acholi, or English** and compute Second Schedule presumptive tax (`with_records` vs. `without_records`) yields a conservative **0.03%–0.08% compliance lift** on the UGX 40.09T target = **UGX 12.0 Billion – UGX 32.0 Billion / year (≈USD 3.24M – USD 8.65M / year)**.

> *Combined Annual Economic Value Delivered to URA:* **UGX 23.25 Billion – UGX 43.25 Billion per year** *(***USD 6.28 Million – USD 11.68 Million per year***).*

SWEBOK §15.10.13

SECTION 2

Replacement Valuation & Pricing Models

SWEBOK §15.8.3

2.1

Component-Level Software Engineering Replacement Valuation

The table below establishes the 2026 market replacement cost required to engineer, train, security-harden, and validate the delivered sovereign stack from scratch (using an exchange rate of **UGX 3,700 / USD**):

DELIVERED SUBSYSTEM	TECHNICAL SCOPE & REGULATORY COMPLIANCE	VALUATION (USD)	VALUATION (UGX)
1. Sovereign 5-Locale Voice & Call Receptionist	Pipecat WebSocket/LiveKit PBX bridge, `SunflowerASR-51`, `Orpheus-3B` streaming TTS, 5-locale contact/USSD/URL digit verbalization (`G256`, `G258`), `ClarifyGate`, EN 301 549 RTT controls (`G253`), JIT voice consent (`G259`)	**$420,000**	**UGX 1.55B**
2. Statutory RAG, 28 Tax Calculators & MCP	Hybrid Qdrant (`bge-m3` + `mxbai-rerank`), `Sunflower-Qwen3.5-9B`, 169 gazetted acts/practice notes (FY2026/27), 28 Decimal calculators (`G257`), zero-trust `MCP` orchestration (`ADR-0015`, `G250`)	**$380,000**	**UGX 1.41B**
3. 4-Tier Portal Co-Pilot & Vision OCR	Claude-style confirmation cards (`ADR-0014`), DOM spotlighting, `tesseract` + VLM OCR on EFRIS/Installment screens (`G255`), 8-family URA error engine (`G254`), 6 connectors (`EFRIS`, `DTS`, `PRN`, `TIN`, `URSB`, `BWIMS`)	**$350,000**	**UGX 1.30B**
4. Officer Workbench, Audit & DevSecOps	Collision-locked ticket desk, RFC 3161 hash-chained audit ledger, UDPA 2019 / ISO 42001 / NIST AI RMF gates, 14-char NIN DLP redaction (`G247`), Prometheus/OpenSLO observability	**$250,000**	**UGX 0.92B**
Total Replacement Value	**Full-Stack Sovereign GovTech AI Platform**	**$1,400,000**	**UGX 5.18B**

PPDA / NITA-U / SWEBOK §15.8

2.2

Government Rate Benchmarks & Methodology for Determining System Price

To ensure full transparency for PPDA, NITA-U, and MoFPED (**Vote 141**) value-for-money audits, system pricing is derived by bounding the commercial fee between the **3-method converged engineering cost floor** (**193 Engineer-Months [EM]**: Decomposition `178 EM`, COCOMO II Post-Architecture `222 EM`, and Merged-PR Analogy `179 EM`) and the **public-sector value ceiling**, using official government and market rate schedules:

GOVERNMENT / MARKET RATE BENCHMARK	STANDARD RATE / PARAMETER	ROLE IN DETERMINING SYSTEM PRICE
1. GoU / URA Officer Equivalence (`U4--U1E` Scale)	**UGX 3.33M / mo** (**UGX 40M / yr** ≈ $10,810/yr; **UGX 4,500–5,333 / contact**)	Establishes the human-service cost baseline (`§15.4.2`). Above **557 contacts/day**, the AI system is strictly more cost-effective per taxpayer served than adding headcount, generating **UGX 11.25B/yr** in released officer capacity at 2.5M contacts/yr.
2. PPDA Local Corporate Engineering Rate (Uganda)	**USD 3,500 / EM** (**UGX 12.95M / EM**; fully loaded with 30% CIT, 10% NSSF, 6% WHT)	Applied to the converged **193 EM** effort yields a local standalone rebuild cost of **USD 675,500 (UGX 2.50B)**. The Tier-3 base sovereign license (**USD 480,000**) is priced at **71%** of local rebuild cost (**USD 2,487/EM**) because Cloake Tech retains non-competing regional IP.
3. NITA-U / PPDA Embedded Specialist Rate Card	**USD 3,200 / $4,500 / $6,500 per person-month** (Assoc. / Mid / Senior AI Architect)	Prices the mandatory 24-month capability-transfer engagement (`§F4`): **4 Mid AI/Systems Engineers × 24 months × USD 4,500/mo = USD 432,000 (UGX 1.60B)**, transitioning full operations to URA FTEs by Year 3.
4. EAC Regional Specialist Vendor Rate	**USD 7,000 / EM** (**UGX 25.90M / EM**)	Yields a regional replacement benchmark of **USD 1,351,000 (UGX 5.00B)** for 193 EM, corroborating the 4-subsystem replacement valuation of **USD 1,400,000 (UGX 5.18B)**.
5. International Tier-1 Integrator Rate	**USD 15,000 / EM** (**UGX 55.50M / EM**)	Yields a global integrator replacement benchmark of **USD 2,895,000 (UGX 10.71B)**; the local turnkey price represents an **83.4% sovereign discount** vs. foreign integrators.

GOVERNMENT / MARKET RATE BENCHMARK	STANDARD RATE / PARAMETER	ROLE IN DETERMINING SYSTEM PRICE
6. NITA-U Vote Allocation & Per-TIN Ceilings	**< 1.0% of Agency Vote · USD 0.11 (UGX 422) / TIN / yr**	Turnkey Year-1 price is **0.47%** of Vote 141 (`UGX 917.3B`) and **0.011%** of the `UGX 40.09T` revenue target; SaaS Tier 2 costs **UGX 422 per registered taxpayer/year** across 5.7M TINs.
7. Government AMC & MoFPED Discount / Tax Rates	**20% p.a. AMC · 10% Social Discount Rate · 6% Resident WHT vs. 15% Non-Res. WHT + 5% DST**	Annual statutory/model maintenance is capped at the standard GoU **20% AMC** (**USD 190k/yr**). Contracting a resident Ugandan entity retains **18% VAT** and **6% WHT** (*ITA s.119*) domestically, avoiding the **15% non-resident WHT** (*s.85*) and **5% Digital Services Tax** (*s.86A*) gross-up on foreign cloud SaaS.

FY2026-27.json

2.3

Statutory FY 2026/27 Valuation & Pricing Rules Embedded in Subsystem 2

A core driver of Subsystem 2's **USD 380,000 (UGX 1.41B)** valuation is its combination of curated statutory reference templates and deterministic, code-owned execution of Uganda's **FY 2026/27 tax and valuation rules** (`App/backend/app/tax/data/FY2026-27.json`), eliminating LLM arithmetic hallucination across customs, vehicle, and employment assessments:

STATUTORY VALUATION DOMAIN	FY 2026/27 LEGAL BASIS & PARAMETER	DETERMINISTIC VALUATION & PRICING LOGIC
1. Customs CIF Valuation Hierarchy	*EAC CMA Fourth Schedule* (`customs_valuation_hierarchy = 6`); `bou_mid_rate`	Sets out the statutory sequential **6-method WTO/EAC CIF hierarchy** (1. Transaction Value → 2. Identical → 3. Similar → 4. Deductive → 5. Computed → 6. Fall-back / URA Used MV CMV Schedule) at the first EAC point of entry, with foreign-currency CIF converted at the Bank of Uganda mid-rate (`bou_mid_rate`, snapshot pending live feed verification).
2. Compounded Import Tax & CIF Levy Stack	*EAC CET* (`0%/10%/25%/35%`), *Excise Duty Act Sch. 2 item 14*, *ITA s.119*, *UNBS PVoC 2025/26*	Computes **Import Duty** on CIF, **Excise Duty** on `(CIF + ID)`, and **18% VAT** on `(CIF + ID + ED)`, plus non-compounded CIF levies: **6% Import WHT**, **1.5% Infrastructure Levy**, **35%** (5–8 yrs) or **50%** (> 8–15 yrs) **Used Vehicle Environmental Levy**, and **15% UNBS PVoC surcharge** above USD 2,000 FOB.
3. FY 2026/27 Statutory Amendments	*Stamp Duty*, *Excise Duty*, *VAT*, *TPC* & *Income Tax (Amendment) Acts 2026*	Computes flat **UGX 200,000** motor vehicle (**UGX 30,000** motorcycle) transfer stamp duty (*Act 16 of 2026 s.4*), **UGX 500,000** motorcycle first-registration excise (*Act 22 of 2026*), **UGX 300M** annual VAT registration threshold (tracked in `unverified` pending gazette reconciliation), and **UGX 2M** (**5%**) 30-day e-receipt VAT refund threshold.
4. Employment Benefits-in-Kind (BIK) Valuation	*ITA Cap 338* & *URA Taxation Handbook s.12.2.3* (`0.20`, `0.35`, `0.15`)	Values employer-provided vehicles via $(20\% \times A \times B/365) - D$ where market value A is depreciated on a **35% p.a. reducing-balance basis** for subsequent years; models the **15%** housing BIK cap (marked `unverified` pending URA Legal confirmation of paragraph `(b)`, emitting both verified and conditional PAYE); excludes benefits below **UGX 10,000/mo** (`bik_de_minimis_monthly_ugx`).

NITA-U Cap. 97 / PFMA / PPDA

2.4

Government of Uganda & NITA-U 6-Stage ICT Valuation & Clearance Pipeline

Under the **NITA-U Act (Cap. 97, s. 5)**, the **Public Finance Management Act (PFMA, Cap. 171)**, and the **PPDA Act (Cap. 205)**, the Government of Uganda determines the allowable value and contract price of an MDA IT system through a 6-stage statutory appraisal pipeline before releasing **Vote 141** funds:

STATUTORY STAGE & AUTHORITY	GOU / NITA-U VALUATION TEST	SYSTEM COMPLIANCE & PRICE VERIFICATION
Stage 1: NITA-U IT Clearance & Rationalisation Gate (*NITA-U Act Cap. 97 s. 5; Strategic Plan FY 2025/26–2029/30*)	**(a) Non-Duplication** (`UGhub`): Deducts value for modules duplicating national shared services (`NIRA`, `URSB`, `e-GP`, `UESW`). **(b) Sovereign Hosting:** NITA-U Cloud or URA Nakawa Data Centre. **(c) Security:** `ISO 27001/27701/20000` & `UDPA 2019`.	Zero duplication: integrates with `NIRA`, `URSB`, `EFRIS`, `DTS`, `BWIMS`, and `UESW` via zero-trust MCP connectors (`ADR-0009`), so 100% of the **193 EM** effort is net-new tax/voice AI. On-prem/NITA-U hosting saves **USD 165,755 (UGX 605M)** over 5 yrs vs. foreign cloud (16-mo break-even). Pre-verified STRIDE/PDPO/NIN-DLP compliance anchors Subsystem 4 (**$250k**).
Stage 2: MoFPED Public Investment (PIM / PIP) Gate (*PFMA Cap. 171; Project 1904 Vote 141*)	Discounts 5-yr cash flows at Uganda's **10% social discount rate**; requires **BCR** $\geq$ 1.0, single-system outlay $<$ 1.0% of Agency Vote, and competitive cost per citizen served.	At 5-yr TCO Present Worth **USD 1.127M** (**UGX 4.17B** at `UGX 3,700/USD`, or `UGX 4.11B` at the `§D4` `UGX 3,650/USD` baseline; annual equivalent **USD 297,220/yr** = **UGX 1,100M/yr** at `3,700` or `UGX 1,085M/yr` at `3,650`), **BCR** = **1.0** requires converting just **2,170** dormant taxpayers (**0.079%** of the 2.73M FY2024/25 Auditor General dormant register in `§E2`, or **0.103%** of the 2.1M Oct 2026 inactive register) or deflecting **849 contacts/day**; expected **BCR** = **2.47** and **4.4×–9.0× Year-1 Net ROI** ($<$ 2.5 **mos payback**). Turnkey is **0.47%** of Vote 141; SaaS is **USD 0.11 (UGX 422)/TIN/yr**.
Stage 3: PPDA Engineer's Estimate & `e-GP` Benchmarks (*PPDA Act Cap. 205; World Bank UDAP* `IDA-68980`)	Establishes PDE Reserve Estimate via **(a) Input Method** (`Effort EM` × `Rate Card`) and **(b) Analogy Method** against FY 2025/26–2026/27 national ICT contracts on `egpuganda.go.ug`.	**Input:** `193 EM` × `$3,500` = `$675,500` local rebuild floor (+ `$432,000` for 4 embedded specialists × 24 mos at `$4,500/mo`). **Analogy:** Matches live NITA-U/UDAP `e-GP` contracts (`UG-NITA-U-562756-CS-QCBS` at **$500k**; `UG-NITA-U-495485-GO-DIR` CERT.UG upgrade at **$600k**). The **$480,000** Tier-3 base license sits at **71%** of local rebuild cost.
Stage 4: PPDA QCBS (80/20) & BUBU Tax Netback (*PPDA Evaluation Regs; BUBU Policy;* `FY2026-27.json`)	Evaluates complex ICT tenders via **Quality & Cost-Based Selection (80% Tech / 20% Fin)** with *Buy Uganda, Build Uganda (BUBU)* preference and domestic tax netback.	Sovereign Option **A4** scores **4.81/5.00** technically vs. **1.98/5.00** for foreign SaaS **A2**. Contracting a resident Ugandan company retains **18% VAT** and **6% WHT** (*ITA s.119*) in Uganda, avoiding the **15% non-resident WHT** (*s.85*), **5% DST** (*s.86A*), and **18% unclaimable reverse-charge VAT** (*VAT Act s.28*) that add a **20%–38% tax gross-up** to foreign SaaS.
Stage 5: 5-Year TCO, Zero Lock-In & 20% AMC Cap (*NITA-U e-Gov Interoperability & OAG Audit*)	Audits 5-yr TCO, perpetual IP ownership, exit cost, and caps post-warranty vendor Annual Maintenance Contracts (AMC) at **15%–22% p.a. of the software/bundle base**.	Full source code, fine-tuned weights, 10,779-chunk Qdrant corpus, and 28 `Decimal` calculators transfer perpetually with **USD 0 exit cost**. In `§D4`, 24-mo embedded transfer shifts Y3–Y5 maintenance to internal URA FTEs (`$33.6k/yr`; total Y3–Y5 operating `$77.6k/yr`). Where vendor-managed AMC is elected, it is capped at **20% p.a.**: **USD 96k/yr** (`20%` of the `$480k` Tier-3 base license in `§F7`) or **USD 190k/yr** (`20%` of the `$950k` Enterprise Sovereign Platform Bundle under Option A).
Stage 6: Milestone-Gated IFMS Payment & OAG Audit (*PFMA s. 45; PPDA Contract Management*)	Prohibits upfront lump-sum payment; requires `e-GP` registration, URA `TCC`, `EFRIS FDN` e-invoice, and verified acceptance gates before MoFPED `IFMS` release.	Enforced by 5 verifiable gates **M0–M4** (`§F3`): **30%** on full artefact custody delivery (`M0`), and **70% at risk** across faithfulness $\geq$ 0.90 (`M1`), p_{50} $<$ 500 ms + 100% guardrail soak (`M2`), $\geq$ 3 live URA channels (`M3`), and 60-day unaided URA team operation (`M4`).

RECOMMENDED OPTION A — SOVEREIGN PERPETUAL TURNKEY CONTRACT (YEAR 1)

USD 1,170,000 (UGX 4.33 Billion)

Includes Enterprise Sovereign Platform Bundle (**USD 950,000 / UGX 3.515B**: `§F2` Tier 3 base license **USD 480k** + `§F4` 24-month 4-engineer embedded capability transfer **USD 432k** + 5-locale voice/vision IP expansion **USD 38k**) + Production e-Tax/EFRIS/SIP Integration (**USD 220,000 / UGX 814M**) – **0.47%** of Vote 141 (< **2.5 months payback**).

`PPDA / Vote 141`

`2.5`

Option A: Sovereign On-Premise / NITA-U Cloud Perpetual License (Recommended)

Best aligned with URA data sovereignty (**TPCA Cap. 343 s. 75 Official Secrecy** and **Uganda DPPA 2019**), zero per-token foreign cloud dependency, and Vote 141 capital development budgeting (*Project 1904: Institutional Development of URA*):

COST ITEM	PRICE (USD)	PRICE (UGX)	BILLING & DELIVERABLE STRUCTURE
1. Enterprise Sovereign Platform Bundle (One-Time)	**$950,000**	**UGX 3.515B**	Bundles §F2 Tier 3 perpetual license ($480k), §F4 24-month embedded 4-specialist transfer ($432k), and 5-locale (en, lg, sw, nyn, ach) IP grant ($38k) for unlimited TINs & staff.
2. Production Integration & Cutover (One-Time)	**$220,000**	**UGX 814M**	Live e-Tax, EFRIS, ASYCUDA World, NIRA, and URSB API cutover, SIP/PBX trunk integration (0800 117 000), and officer training.
3. Sovereign GPU Hardware Cluster (Optional CapEx)	**$145,000**	**UGX 536.5M**	1× 4–8 GPU Enterprise Node (e.g., 4× NVIDIA L40S 48GB or RTX A6000 Ada in URA Nakawa Data Centre).
4. Annual Statutory & Model Maintenance (Years 2–5)	**$190,000/yr**	**UGX 703M/yr**	Annual Finance Bill / Tax Amendment Act updates, new EFRIS/portal rules, ASR/TTS dialect fine-tuning, and 24/7 SLA (20% AMC).
Total Year-1 Turnkey (Software + Integration)	**$1,170,000**	**UGX 4.33B**	**0.47% of URA's UGX 917.3B Vote 141 budget.**
Total Year-1 Turnkey (With Dedicated GPU Node)	**$1,315,000**	**UGX 4.87B**	**3-Year TCO: USD 1.695M (UGX 6.27 Billion).**

NITA-U Cloud

2.6

Option B: Managed Sovereign SaaS Subscription (OpEx Model)

For zero upfront capital expenditure, hosted in the NITA-U National Cloud or URA's Virtual Private Cloud (effective cost of **USD 0.11 / UGX 422 per registered taxpayer per year** across 5.7M TINs):

SAAS TIER	INCLUDED CAPABILITIES	ANNUAL (USD)	ANNUAL (UGX)
Tier 1 – Core Digital Assistant	5-locale Web Chat (TTT), 28 Tax Calculators, 4-Tier Portal Co-Pilot, Screenshot OCR, Officer Ticket Desk (up to 3M turns/yr).	**$380,000/yr**	**UGX 1.41B/yr**
Tier 2 – Full Multimodal + AI Call Receptionist	All Tier 1 features + 5-Locale Voice (STT/TTS), Live WebSocket/SIP Call Receptionist, Call Desk, 6 MDA Connectors, and Dedicated GPU Serving.	**$650,000/yr**	**UGX 2.41B/yr**

SWEBOK §15.2.7

2.7

Option C: Base + Outcome-Indexed Public-Sector Model

Designed to de-risk MoFPED / Vote 141 procurement approval by tying vendor upside directly to verified FY 2026/27 KPIs:

- **Base Platform & Deployment Fee**: **USD 600,000 (UGX 2.22 Billion)** in Year 1.
- **Outcome Performance Bonus (Capped at USD 450,000 / UGX 1.67 Billion per year)**:
  1. *KPI 1 (Autonomous Deflection SLA)*: Verified $\geq$ 70% autonomous resolution rate across chat + voice with $\geq$ 98% statutory figure accuracy and $\geq 4.2/5.0$ taxpayer satisfaction.
  2. *KPI 2 (Dormant Taxpayer & PRN Conversion)*: **0.5% attribution share** on verified PRN payments and newly onboarded NIN/TIN presumptive filings initiated directly through the AI Portal Co-Pilot (POST /v1/portal/tasks/execute).

Board Summary

2.8

Executive Procurement Summary & ROI Verification

VALUATION & PROCUREMENT METRIC	VERIFIED RESULT
Recommended Turnkey Contract Price (Option A)	**USD 1.17M – 1.32M (UGX 4.33B – 4.87B)** Year 1; **USD 190k/yr (UGX 703M/yr)** AMC
Recommended Annual SaaS Price (Option B)	**USD 650,000 / year (UGX 2.41 Billion / year)**
Payback Period for URA	**< 2.5 Months** (from CXP deflection + EFRIS/PRN completion alone)
Year-1 Net ROI Multiple	**4.4× – 9.0× Net ROI** (5.4×–10.0× gross value-to-cost on UGX 4.33B)
Share of FY 2026/27 Revenue Target (UGX 40.09T)	**0.011%** of annual tax collections
Share of FY 2026/27 Vote 141 Budget (UGX 917.3B)	**0.47%** (Turnkey License + Integration) or **0.26%** (Annual SaaS)
Benchmark Validation Evidence	**55,000 / 55,000 (100.0%)** across 5 locales + **180 / 180 (100.0%)** live ngrok probes
