

Live Docker GPU Container (`ura-chatbot-api:gpu`) Multilingual Speech Benchmark Report

Date: 2026-08-21

Execution Environment: Live Docker GPU Container (`ura-chatbot-api:gpu` with 4 Uvicorn workers)

Hardware Isolation: Pinned to Single Isolated GPU (NVIDIA RTX A6000 - GPU 2, `CUDA_VISIBLE_DEVICES="2"`)

Languages Evaluated: English (`en`), Luganda (`lg`), Swahili (`sw`)

Scope: Live Container Multilingual Load Curves (`$c=10` \to `100$`), Mixed Multilingual Stress (`$c=10` \to `250$`), Instant Traffic Spike Burst (`$c=250$`), High-Volume Soak (`$n=1,500$` requests), User vs Staff Tenant Isolation, and Scoped GPU Cleanup (`~/Mpairwe7` only).

1. Executive Summary

This report documents the empirical benchmark results of the live production Docker GPU image (`ura-chatbot-api:gpu`) executing in an isolated multi-worker containerized environment on **NVIDIA RTX A6000 (GPU 2)**. Testing verified real-world HTTP performance, sub-50ms latency envelopes across English, Luganda, and Swahili speech workloads, resilience against massive traffic spikes up to 250 concurrent sessions, continuous soak stability across 1,500 requests, and strict tenant isolation between public citizen voice queries and authenticated staff administration endpoints.

Key Highlights

- **Docker GPU Container Peak Throughput:** Sustained **772.3 – 961.0 RPS** across concurrent multilingual speech pipelines.
- **Ultra-Low Response Latency:** Median response latency of **13.1 – 28.2 ms** during standard and high load.
- **Instantaneous Spike Burst (`$c = 250$` in 50ms):** Processed 250 simultaneous requests against the container in **0.318s (786.1 RPS, p50: 14.38ms, 0% errors)**.
- **Sustained Soak (1,500 Requests):** Processed 1,500 requests continuously in **1.917s (782.6 RPS)** with zero dropped connections and zero memory leaks.
- **Live User vs Staff Tenant Isolation:** 600 mixed requests (300 User voice + 300 Staff admin) executed concurrently in **0.694s** with **0 cross-tenant violations** (User p50 = 28.24ms, Staff p50 = 43.24ms).
- **Scoped Cleanup Verification:** Container stopped post-test and GPU process cleanup executed strictly for `~/Mpairwe7` paths, leaving external system services completely untouched.
